

ACT@SCALE: ADVANCING CARE COORDINATION AND TELEHEALTH DEPLOYMENT AT SCALE

C. Bescos, C. Westerteicher (Philips Healthcare); S. Pauws, H. Schonenberg, V. Gaveikaite, R. v. d. Heijden (Philips Research); P. Natsiavas, D. Filos, C. Maramis, I. Chouvarda, N. Maglaveras (Aristotle University Thessaloniki); S. Newman (City University London); J. Roca, J. Escarrabill (IDIBAPS); M. Moharra, T. Salas (AQuAS); C. Buchner, S. Hun, E. Ritson (Public Health Agency NI NRE); C. Pedersen, E. Nielsen, M. Craggs (Region South Denmark); D. Barrett, J. Hatfield (University of Hull); A. Gine, A. Fullaondo, E. de Manuel (Kronikgune); E. Buskens, M. Lahr (UMCG); I. Zabala (OSAKIDETZA); S. Störk, C. Wahl (University of Würzburg).

ACT@Scale is a European project that aims to implement, develop and consolidate **Good Practices in Integrated Telemonitoring Attention**, boosting its

scaled and transferring the lessons learned from this to other European regions.

The project comprises **13 partners from 6 EU** and associated countries including 5

deployment sites across 4 of the countries coordinated by Philips Healthcare in Germany.

REGION	NUMBER OF PATIENTS IN 2016	EXPECTED NUMBER OF PATIENTS BY 2019
RSD	430	2000
Cat	5000	15500
Gron	18500	35200
Bas	6350	18400
NIR	2000	4200
TOTAL	32280	75300

The overall goal for ACT@Scale is to **identify, transfer and scale up** existing and operational Care Coordination and Telehealth good practices with the target of reaching a total of **75,000 care recipients by 2019** across regions and programmes in 5 European regions (Basque Country, Catalonia, Groningen, Northern Ireland and South Denmark).

ACT@Scale will use multi-organisational structured collaborative quality improvement methods based on Plan-Do-Study-Act (PDSA) cycle within the following general topics:

- Stakeholder management and change management
- Optimisation of recruitment-service selection and service dynamic adaptation
- Sustainability and business case
- Citizen empowerment

Figure 4 From state of the art through ACT towards ACT@Scale

In the coming three years, the exploration of the key areas will show how technology and services can ensure the optimal upscaling process.

A holistic assessment will be performed based on an agreed minimum dataset of indicators supported by local and centralized data management tools.
